

## KS4 Engineering Curriculum Plan 2014-15

10 hours taught per fortnight

AQA GCSE Specification

<http://www.aqa.org.uk/subjects/engineing/gcse>

Full details of the units:

<b>Topic</b>	<b>Content summary</b>
<b>Designing and communicating</b>	Use a client design brief To determine the function and user requirements To establish the limits or constraints on a design Convert a client design brief to a specification To specify: size, shape, function, limiting features, functional requirements Use and modify a specification Use the design process to Generate ideas/possible design solutions for engineered products Produce a solution expressed as a drawing/model Simple drawing techniques Orthographic projection – third angle only Isometric projection Manual drawing methods Formal drawing and sketching Scale – 1:1 1:2 1:5 Computer Aided Design 2D using standard conventions either electrical or mechanical 3D solid modelling Using a computer program to simulate the operation of an electrical or mechanical system Explain a design proposal to a third party Use drawings or models to present ideas Respond to client feedback
<b>Understanding engineered products</b>	Materials <ul style="list-style-type: none"><li>• Polymers</li><li>• Ferrous metals</li><li>• Common non-ferrous metals and alloys</li><li>• Composites</li><li>• Ceramics</li></ul> Materials, Technologies and Design Considerations Ability to be: <ul style="list-style-type: none"><li>• shaped and formed</li><li>• machined</li><li>• treated</li><li>• given a surface finish</li><li>• re-cycled and re-used</li></ul> Comparative ease of handling, cost, availability and form Components <ul style="list-style-type: none"><li>• Mechanical</li><li>• Electrical and electronic</li><li>• Pneumatic/hydraulic</li></ul>

	Production methods including mould and jig use
<b>Manufacturing an Engineering Product</b>	<p>Produce production plans  Manufacturing to a production plan, which is related to the production of a “one–off” or limited batch production of an engineering product  Using tools and equipment  Understanding the reasons for the selection and use of specified materials, components, processes, tools and equipment  Working safely  Identification of Health and Safety issues including the use of Personal Protective Equipment  Quality issues – tolerances and using accurate measurement systems  Planning and organisation – organising the work, planning sequences of operations  Analyse and revise the completed project, taking into account how it could be improved</p> <p>Engineering Processes:  Including material removal, shaping and manipulation, joining and assembly, heat and chemical treatment and surface finishing including the following:  Machining operations  Turning  Milling or routing  Drilling  Cutting  e.g. sawing, shearing  shaping  casting  forming  bending or vacuum forming  joining  Rivet, threaded fasteners, welding and soldering  Surface finishing  Painting, plating, surface finishing</p>
<b>Application of New Technologies</b>	<p>CNC cutting limited to two axes, e.g. vinyl or laser cutters, drilling or profile cutting or milling Printed Circuit Board.  Impact of Modern Technologies  Describe the impact of modern technologies:</p> <ul style="list-style-type: none"> <li>• when engineering a product</li> <li>• on engineered products</li> <li>• on engineering industries</li> <li>• on the stages of engineering a product.</li> </ul> <p>Describe the advantages and disadvantages that the use of modern technology has brought to society, including environmental issues and sustainability.  Investigate a range of engineered products to determine the impact of modern technology on design and production methods.</p>
